

# NBS HORIZON® Monochrome Thermal Printer CPE

The Monochrome Thermal Graphics Printer CPE produces high quality thermal graphic images (such as barcodes, text, logos, etc.) at minimal cost, making it a desirable addition to any Horizon® system. It uses the industry's highest resolution thermal print head (300 dpi, 11.8 dmm), tape for card cleaning, a removable ribbon plate assembly for easy ribbon changing and maintains a throughput rate of up to 1200 cards per hour while conserving ribbon usage.

Multiple Graphics Printer CPEs can be installed allowing the system to be tailored for specific requirements. These units receive card layout information (whether it is text, images or barcodes) from the Horizon software. Font and point size is software selectable using standard Windows® fonts. Nine different ribbon colors are currently available including scratch-off (used to make prepaid telephone or promotional cards).

The Monochrome CPE is capable of printing:

- Barcodes
- Company Logos
- Fixed Text
- Data fields with personalized information (i.e., name, etc.)
- Scratch-Off Foils
